# Unit Economics -- L Codyt5

Anticloud FZ LLE * 0-1.gg * lois@0-1.gg * October 2026

## Unit Economics -- L Codyt5

*Anticloud FZ LLE* 0-1.gg *lois@0-1.gg**

*Date:** October 2026

---

## Headline Metrics

---

## Revenue Per Tier

---

## Infrastructure Cost Model

*Hardware:** NVIDIA T4 16GB GPU

*On-demand price:** $0.40/hr (AWS g4dn, GCP T4, Lambda Cloud)

**Throughput:** PAX L5 Narrow L2 General 27B at ~5M tokens/hr on T4 (Q4 quantized, batch 8)

*Cost per 1M tokens: $0.40 / 5 = $0.08**

*At scale (dedicated GPU, reserved):**

* Reserved T4 instance: ~$0.18/hr
* Throughput: 5M tok/hr
* Cost per 1M tokens: **$0.036** (55% cheaper than on-demand)

---

## Magic Number (Sales Efficiency)

**Magic Number > 1.0 = healthy.** >1.5 = exceptional. PAX projected at 1.64 due to low infrastructure cost, compliance-mandatory market (demand-pull), and no cloud dependency for delivery.

---

## Burn Multiple

*Burn multiple < 1.5x at scale = Sequoia-grade efficiency.**

---

## Cohort Retention Assumptions

---

## Sensitivity Analysis (Cost per Token)

Margins improve at scale. Unit economics are hardware-driven, not human-driven.
